Welcome Message

As GOLD Lactation enters its 14th year, we’re eager to continue our work of exploring the latest research, trends, new ideas and hot topics in the world of human lactation. This is an exciting time of new research and shifts in thinking and understanding. Join us for an amazing program of thought provoking topics and speakers who will expand your knowledge and skills!

One of the things we love about GOLD is that not only does it provide easy access to education from experts around the globe, it gives us the opportunity to learn from one another at the same time. Our learning experience is greatly enriched by being able to experience it with friends and colleagues, both old and new. Each year when we see your familiar names in our presentation rooms, and as we chat with you via our forums, Facebook and Twitter, it's like coming home to family. We look forward to learning and sharing with you once again!

The GOLD Learning Family

Fleur Bickford  
BSC, RN, IBCLC  
Director of Educational Programming

Fiona Lang-Sharpe  
IBCLC, NAMCW  
Director of Communication & Master of Ceremonies
Important Dates

January 15, 2020
Early Bird Registration Opens

March 16, 2020
Early Bird Registration Ends

March 17, 2020
Regular Registration Begins

April 6, 7, 14, 15, 20, 21, 27, 2020
GOLD Lactation 2020 Live Days

May 15, 2020
Registration Closes

June 1, 2020
End of Conference- Final Day to View Recordings*

June 22, 2020
Final Day to Download Certificates

*GOLD Annual Members will have an additional 3 weeks of viewing time (Until June 22th, 2020)

7 Great Reasons to Attend
GOLD Lactation 2020

1. Informative!
Access 32.5 Hours of the latest, evidence-based breastfeeding research, clinical skills, case-studies, cultural experiences & industry initiatives.

2. Convenient!
Watch in your pyjamas! Access presentations for a full 8 weeks as many times as you like! No travel, hotels or time away from clients and loved ones.

3. Economical!
Under $7 USD per Educational Hour! At GOLD our goal is to make education financially accessible for all. Discounts available for Students, Volunteers, Groups, Associations & Institutions.

4. Group & Association Rewards!
Register as a group and continue the conversation offline! New incentives for Group Coordinators & their members now available. Associations are eligible for exclusive membership discounts + ask us about our Get 10, Give 10 Association rebate program.

5. International!
Join a growing GOLD Community! Over 3200+ Delegates from 80 Countries attended in 2019.

6. Interactive!
Participate in Online Chats, Live Question & Answer sessions, and Speaker Moderated Forums.

7. Accredited!
32.5 CERPs, 28.5 CMEs, 28.5 Nursing Contact Hours, 28.5 Dietetic CPEUs & 2.8 Midwifery CEUs Approved. This program has applied for an additional 4 CERPs for Interactive Sessions which are a part of the main
Welcome to the GOLD Lactation Online Conference! We are the largest annual breastfeeding conference in the world, serving over 3200 delegates from over 80 different countries every year. GOLD Lactation is hosted by GOLD Learning Online Education and has been bringing quality continuing education to lactation professionals, peer supporters and students since 2007.

Our online format allows access to the knowledge and experience of industry leaders, all from the comfort of your own home or workplace. The knowledge within the field of study of human lactation is growing and changing at an incredible rate. Our goal with GOLD Lactation is to help bridge the gap between established protocols and practices and the rapid growth of new research. Join us during the live days of the conference to interact in real time with the speakers and your fellow delegates. Pause, forward and rewind presentation recordings to learn at your own pace. All of our conference sessions are accredited, and delegates are able to collect educational hours and download one or more of the following certificates: CMEs, CNEs, CERPs, MEAC CEUs and Dietetic CPEUs. Learn and grow with our large selection of international speakers, unique add-on packages and special GOLD Learning events. Become a part of our vibrant GOLD community!

About GOLD Lactation

Education Planning & Delivery Committee

Fleur Bickford  
BSc, RN, IBCLC  
Director of Educational Programming

Fiona Lang-Sharpe  
IBCLC, NAMCW  
Director of Communication & Master of Ceremonies

Kristin Schwarz  
LM, Master of Ceremonies

Cynthia Good  
MS, LMHCA, CDE, IBCLC, CATSM  
Program Chair

Stephanie Pitman  
BScN, RN, PNC (C)  
Lead Nurse Planner

Anne Eglash  
MD, IBCLC, FABM  
Physician Reviewer

Isabel Da Costa  
Event Manager

Nina Adrianna  
Virtual Speaker Manager

Jessica Lamb-Brown  
Technical Support

Brandi Paquette  
Technical Support

Professional Advisory Committee

Along with the Program Director, the GOLD Professional Advisory Committee is responsible for the review and selection of the conference presentations.

Barbara Robertson  
BA, MA, IBCLC, LLL

Carmela Kika Baeza  
MD, IBCLC

Christal Brodziak  
BN in Nursing, IBCLC

Effath Yasmin

Marissa Honey-Jones  
IBCLC

Sejal Fichadia  
IBCLC

Stephanie Vann  
RN, BS in Nursing, MS in Nursing Education, IBCLC

Stephanie Brown  
RN IBCLC (BSN)

Conflict of Interest Statement

GOLD Lactation Online Conference is proud to be one of the only continuing education events that is WHO Code compliant! As such, we do not accept sponsorship or advertising from any manufacturer, organization or company that is deemed to be in violation of the World Health Organization’s International Code on Marketing of Breast Milk Substitutes. As well, we require our Speakers to sign an agreement stating their knowledge of and compliance with the WHO Code.
Bryna is a lactation consultant, educator, and birth doula. She began her education in marine chemistry, but pivoted to birth work after the birth of her daughter, Maia. After a rigorous 4500hr internship before sitting for the IBCLC exam, she discovered she never wants to stop learning about the things that impact pregnancy, birth, and lactation (which is pretty much everything). Enamored with all things continuing education, Bryna has undertaken many various courses and offerings, as well as research on her own. She has a particular heart for reflex integration in lactation care, as well as advocacy for equitable treatment for LGBTQ+ families in birth and lactation. Bryna has four children, and lives with her family, dog, ducks, and chickens near Portland, Oregon, in the American Pacific Northwest. When not teaching, attending births, seeing clients, or child wrangling, Bryna likes to knit and attend Renaissance Faires, sometimes at the same time!

Breastfeeding With Ease: The Impact of Infant Reflex Emergence and Integration - 75 minutes

Reflexes play an important role in an infant’s ability to feed effectively. This foundational presentation discusses the process of reflex emergence and integration, the importance of reflexes in breastfeeding/chestfeeding and the impact of disorganized or absent reflexes. Also covered will be the impacts of trauma on infant reflex integration and the role of the lactation consultant in assessment and referral.

Mona Liza Hamlin, MSN, RN, IBCLC

Mona Liza Hamlin, MSN, RN, IBCLC is the nurse manager of Perinatal Resources and Community Programs for the Women & Children's Service Line at Christiana Care Hospital in Newark, Delaware. Her role consists of improving both inpatient and outpatient programs that focus on reaching the triple AIM, and improving health equity in the state of Delaware. Hamlin serves as Past-Chair to the United States Breastfeeding Committee (USBC). The USBC is a coalition of more than 50 organizations that support its mission to drive collaborative efforts for policy and practices that create a landscape of breastfeeding support across the United States.

She is a founding member of the National Association of Professional & Peer Lactation Supporters of Color (NAPPLSC), an organization aimed at addressing breastfeeding disparities and improving breastfeeding amongst families of color. Hamlin also serves as a member of the Delaware Healthy Mother & Infant Consortium and is a board member for the Breastfeeding Coalition of Delaware. Her fundamental belief is that equitable access and high quality care are provided to all women and families, especially those most vulnerable to lack of access and systemic barriers to care. Fueled by her professional and personal experiences and passions, Hamlin strives to ensure that all mothers have access to a full scope of perinatal care, support and resources.

Breastfeeding As A Preventative Care Change Model: How to Affect Change - 75 minutes

No matter where we look health disparities, morbidity and mortality continue to persist. This is especially true in the maternal child health field. We all understand the value of breastfeeding and human milk and it is now critical to merge that value across the spectrum of maternal child health. No matter the organization or work we are in; clinical, community, public health, or policy; we must create connections that improve and create holistic approaches to improve health and prevent illness. Linking breastfeeding and human milk in efforts made outside of the field of lactation will improve overall efforts to improve maternal child health. This discussion will give opportunity to explore how to engage with non traditional stakeholders and make the connections where breastfeeding isn’t traditionally included to discuss preventative care for maternal child health as a whole.

2020 Conference Speakers & Topics

**Annie Frisbie MA, IBCLC**

Annie Frisbie has been an IBCLC in private practice since 2011. Her background is in media, where she worked very closely with producers, content developers, and tech thought leaders on business strategy, content development, contracts, legal clearances, and more. She has also produced training for professional media software solutions as well as created and managed print and video content for media professionals.

In 2018 she was honored with the US Lactation Consultant Association’s President’s Award, “awarding those that demonstrate extraordinary service to the association and profession.”

She is a produced screenwriter and proud member of the Writers Guild of America, East. She have a BA from Franklin and Marshall College, and an MA in Cinema Studies from New York University. In a previous life I was a film critic. I live with my husband and our two children in Queens, New York.

**The Ethics of Digital Privacy and Lactation Practice - 60 min**

As healthcare providers incorporate technological solutions into their practices, they also face the increasingly complex task of protecting the privacy of their patients/clients. Some countries have laws in place that healthcare providers need to understand and follow, but all healthcare providers regardless of practice setting have an ethical responsibility to maintain rigorous standards when it comes to digital privacy.

Because technology changes so rapidly, keeping up-to-date with privacy regulations proves challenging for both large institutions and solo practitioners. Lactation must also be concerned with the privacy of more than one entity while serving a patient base that may have already faced numerous privacy and consent violations during pregnancy and childbirth. By valuing the privacy of lactating persons and their children, legal, ethical, and moral obligations can be met, enhancing client/patient autonomy and improving self-efficacy.

This session provides a framework for understanding digital privacy and privacy threats, and offers resources for implementing policies and procedures that protect patient/client privacy.

**Bryna Sampey IBCLC**

Bryna is a lactation consultant, educator, and birth doula. She began her education in marine chemistry, but pivoted to birth work after the birth of her daughter, Maia. After a rigorous 4500hr internship before sitting for the IBCLC exam, she discovered she never wants to stop learning about the things that impact pregnancy, birth, and lactation (which is pretty much everything). Enamored will all things continuing education, Bryna has undertaken many various courses and offerings, as well as research on her own. She has a particular heart for reflex integration in lactation care, as well as advocacy for equitable treatment for LGBTQ+ families in birth and lactation. Bryna has four children, and lives with her family, dog, ducks, and chickens near Portland, Oregon, in the American Pacific Northwest. When not teaching, attending births, seeing clients, or child wrangling, Bryna likes to knit and attend Renaissance Faires, sometimes at the same time!

**Rhythmic Movement for Breastfeeding Function - 60 min**

Disorganized or absent infant reflexes can create challenges for breastfeeding/chestfeeding. This presentation takes a close look at the role of movement in the integration of disorganized infant reflexes and the use of rhythmic movement as a method for overcoming infant feeding challenges. This talk also covers socio-cultural impacts of trauma, lack of opportunity for movement, and modern care system barriers to reflex integration.

**Carlos González MD**

Carlos González was born in Zaragoza, Spain, in 1960. He is married and is the father of three children. In 1983 he graduated in medicine at the Autonomous University of Barcelona, and between 1984 and 1987 he studied pediatrics at the Hospital of Sant Joan de Déu in that city.

He is founder and president of ACPAM (Catalan Association for Breastfeeding) since 1991. Since this association he has directed and taught in more than 100 courses on breastfeeding for health professionals. He is the author of several books, including My child won't eat, Kiss me!, and Breastfeeding made easy. He has lectured for professionals or general public in Germany, Andorra, Argentina, Austria, Bolivia, Chile, Colombia, Costa Rica, El Salvador, Spain, United States, France, Greece, Guatemala, Honduras, Ireland, Israel, Italy, Luxembourg, Mexico, Panama, Paraguay, Peru, Poland, United Kingdom, Dominican Republic, Russia, Uruguay and Venezuela.
Since 1994, he has been a regular contributor to Ser Padres magazine, where he attends a nursing and child feeding office. He has also collaborated with other publications, such as the magazine Tu Baby, Mente Sana, Lecturas, the disappeared Solaica and the newspaper in Catalan Ara.

Growth Charts, Use and Abuse - 60 min
Inappropriate use of growth charts can cause familiar anxiety, unnecessary supplementation, early weaning, unnecessary testing and force-feeding. With half of the population below the mean, at least a 3% of the average weight of people are (and have to be) under the third percentile. Percentile lines are mathematical constructions, and do not represent the actual growth patterns of individual babies.

**Chauntel Norris CLC**
Chauntel Norris is a native of Birmingham, AL. She attended the University of Alabama at Birmingham where she earned her B.A. in African American Studies & her B.S. in Psychology.

Chauntel is a DONA trained Birth & Post-Partum Doula, a Lamaze trained Childbirth Educator and a Certified Lactation Counselor. She is the Co-founder of Baobab Birth Collective and currently serves as the Mother’s Milk Initiative Coordinator for the Alabama Prison Birth Project.

Chauntel is the mother of two brilliant children Amaiya and Ozell.

**Facilitating Breastfeeding Among Incarcerated Women - 60 min**
During this presentation the barriers of incarceration as it relates to lactating parents will be discussed. An overview of Program development, Partnerships development and working with corrections will also be considered. I will also show how our Alabama initiative combats those barriers and allows incarcerated women to be able to provide their milk to their infant.

**Divya S. Parikh MD, IBCLC**
Divya Sinha Parikh, MD, IBCLC, FAAP is a board certified pediatrician practicing in Columbus, OH. She received her medical training at The University of Pittsburgh School of Medicine and completed her residency in general pediatrics at Rainbow Babies and Children’s Hospital at Case Western Reserve University. She formerly served on the Baby Friendly Hospital Initiative Committee at MetroHealth Hospital Systems in Cleveland, OH and created a breastfeeding medicine clinical rotation during residency. Within her practice, she has extensive experience managing lactation concerns and has taken a special interest in mentoring current and aspiring breastfeeding providers. She has presented her work at local and national meetings.

**When Supply is Greater than Demand: Maternal Hyperlactation Syndrome - 60 min**
The objectives of this lecture are to understand the definition, pathophysiology, and basic management of hyperlactation. Topics discussed will include proposed mechanisms leading to hyperlactation, health effects on mother and baby, and approach to diagnosis and management. Participants will learn key history and physical findings for hyperlactation, behavioral interventions to reduce milk supply, herbal and medical interventions to reduce milk supply, and will learn how to determine which dyads would benefit from medical intervention.

**Dixie Whetsell MS, IBCLC**
Lisa Gonzales BSN, RN, IBCLC

Dixie Whetsell, MS, IBCLC, has a Master’s Degree in Community Health Education from the University of Oregon. She began working with breastfeeding families in 1992 and became an IBCLC in 1998. She has worked as a lactation consultant in a variety of settings including private practice, county and state public health programs and high risk maternal and pediatric hospitals. She began teaching lactation training courses in 2003 and is currently an adjunct faculty member teaching in the Pathway 2 Lactation Training Program in the OHSU-PSU School of Public Health at Portland State University. She is a past presenter for the GOLD Perinatal Conference. She is an active member of the Oregon Washington Lactation Association, the US Lactation Consultant Association and the International Lactation Consultant Association. She was a founding Board Member for Northwest Mothers Milk Bank, a HMBANA non-profit donor milk bank.

Lisa Gonzales, BSN, RN, IBCLC earned her Bachelor of Science in Nursing from Linfield College. She started her nursing career as a Labor and Delivery nurse at a Level III OB hospital in 2006. After having her first baby, Lisa pursued lactation education and became an IBCLC in 2013. She made full career change in 2015 to become a lactation nurse in a high risk maternity and pediatric hospital, providing inpatient and outpatient consults to growing families. She is an active member of the Oregon Washington Lactation Association, the US Lactation Consultant Association and the International Lactation Consultant Association. Lisa currently helps families during in-home visits with her private practice.

**Lactation Anaphylaxis: A Case Study - 60 min**
This case describes a 32-year-old primiparous woman who experienced an anaphylactic reaction associated with breastfeeding and milk expression on postpartum day four. With each episode her symptoms worsened and she developed hives, edema and difficulty breathing and swallowing. She had to be treated for her anaphylactic
reaction in a hospital ER and ICU and she was released on postpartum day five on antihistamines.

Lactation anaphylaxis is a very rare condition that was first reported in the scientific literature in 1991. Since then there have been 11 other reported cases. Lactation anaphylaxis can be life-threatening and symptoms can include a rash, hives, edema resulting in difficulty breathing or swallowing, a dangerous decrease in blood pressure and a loss of consciousness. We will review this case and do a brief review of the previous case reports. We will discuss the possible causes for lactation anaphylaxis, the related risk factors, common treatments and possible breastfeeding outcomes. In most cases with proper treatment and management breastfeeding and milk expression can continue. Enhanced awareness of and knowledge about this rare condition will allow lactation consultants and other members of the health care team to better support breastfeeding parents who experience lactation anaphylaxis.

Duncan Fisher OBE

Duncan Fisher promotes and develops support for parents to advance child health and development. In the last year he has been working with breastfeeding researchers across the world and with the World Alliance for Breastfeeding Action to advance the idea of “breastfeeding as teamwork”, following striking findings from research of the high gains from engaging with fathers and other family members. In UK he co-founded the Fatherhood Institute and for three years he served on the Board of the Government's gender equality body, the Equal Opportunities Commission. He manages the website, FamilyIncluded.com, where all recent research on breastfeeding and fathers/families is reported. He initiated and currently manages a website for Cambridge and Princeton Universities reporting research on child welfare and development, ChildandFamilyBlog.com. He was awarded an OBE by the Queen in 2008 for his “services to children”. Duncan lives in Wales and divides his time between family work and work to support sustainable economic development in his home country.

Jessie Young DC

Dr. Jessie Young is a Pediatric Chiropractor near Olympia Washington who works closely with other healthcare professionals to provide comprehensive and collaborative care. She has specialized education in treating breastfeeding difficulties and is near completion of her IBCLC certification. As part of a family’s health care team, Dr. Young helps resolve musculoskeletal issues causing breastfeeding difficulties including neck tension, TMJ dysfunction, torticollis, and painful latch. She also provides pre and post-frenotomy care for musculoskeletal issues contributing to tethered oral tissue. Providers, parents and patients rely on Dr. Young for her comprehensive diagnostic and treatment approaches, including modified chiropractic adjustments, myofascial release, therapeutic exercise, and craniosacral techniques. Dr. Young currently volunteers to promote literature contributions and advancement as the Research Chair for the American Chiropractic Association Council on Chiropractic Pediatrics.

Identifying Musculoskeletal Issues That Impact Breastfeeding - 60 min

Identifying musculoskeletal issues that can impact breastfeeding is an important component of proper management. When surveyed, IBCLCs reported that half were not comfortable identifying musculoskeletal issues. Referrals for musculoskeletal problems were thus hypothesized to be delayed as a result of this discomfort. It was recommended that lactation professionals could benefit from more specialized training in identifying musculoskeletal issues, as early intervention for breastfeeding difficulties is a critical determinant in success.

Attendees will be able to take away the skills and tools to better identify musculoskeletal problems, the indications for co-management/referral and the safety and effectiveness of manual therapy for suboptimal breastfeeding. Issues such as TMJ dysfunction, postural asymmetry, cranial asymmetry, myofascial and joint restrictions commonly cause suboptimal breastfeeding. Current literature supports the fact that favorable outcomes are probable when these issues are treated with manual therapy. Thus the timely identification, referral, and resolution of musculoskeletal issues is one factor that can contribute to the resolution of breastfeeding difficulties.

How To Enhance Breastfeeding A Lot: Engage Fathers. - 60 min

Breastfeeding programmes that engage fathers are more effective than ones that only involve mothers and professionals. This accords with research that has shown that family is the main influence on breastfeeding. The way that families influence breastfeeding is diverse, depending on the make-up of the family, local culture and location (e.g. urban/rural). The influence of fathers is not necessarily intentional, but what fathers think and do influences the situation in almost every situation. In this presentation I will describe the principles of success that have been learned from programmes with published evaluations. These principles can be summed up in the phrase recently adopted by the World Alliance for Breastfeeding Action, “breastfeeding is teamwork.”
Jo Gilpin RM CHN IBCLC

Jo Gilpin is a Registered Nurse, Midwife and has worked for many years as a Child Health Nurse with the Child and Family Health Service in South Australia (CaFHS). During this time she completed a Graduate Diploma in Health Counselling. She also studied Infant Mental Health at the University of South Australia. She became an IBCLC in 1996.

Her passion throughout has been educating, encouraging and supporting parents to have successful, enjoyable, breastfeeding relationships with their babies. This has been the main focus of her work.

She has worked privately as a Lactation Consultant since 2005. She has published two books, both on breastfeeding. Her most recent is ‘Brilliant Breastfeeding: A Sensible Guide’. This was published in October 2018. This book aims to sensitively guide parents and future parents towards fulfilling breastfeeding relationships with up-to-date, evidence-based information. Attention is paid to the many challenges that parents face.

Jo loves what she does and never considers it ‘work’. She lives with her husband on Kangaroo Island, which is just off the southern coast of South Australia. Her children and five grandchildren live in Sydney and Brisbane.

Birth and Breastfeeding Outcomes - 60 min

A baby's birth can have a significant impact on breastfeeding outcomes. Medical intervention in normal birthing situations is rife, and globally cesarean rates have soared since 2000. Along with this, breastfeeding rates are less than ideal. A mother who feels a sense of grief about the birth of her baby is consequently more likely to face breastfeeding challenges. IBCLC’s, midwives and medical officers will often begin a breastfeeding consultation by listening to a mother's unhappy perception of her baby's birth. This aspect needs to be sensitively supported. It is high time we take stock and pay more attention to what world health authorities are recommending to improve birthing and thus breastfeeding outcomes. These outcomes can affect a mother’s feelings of empowerment, her physical and mental health. Baby’s health and general development are statistically better when breastfed. There are significant financial savings made by reducing costs in various countries health systems when mothers breastfeed successfully.

There are definite changes we can make, following recommended guidelines and recent research. We can do this individually in our work and also in our affiliations with professional bodies by supporting and encouraging government policymakers and advocacy groups. These are our future challenges.

Juanita Jauer Steichen MA, IBCLC

A Canadian living in France for more than 25 years, Juanita discovered breastfeeding with her three children and has never looked back.

Juanita was the coordinator for the Journée Internationale de l’Allaitement (JIA’ – International Breastfeeding Conference for health professionals organized by LLL France) in 2003 and 2008. She helped create and implement the Peer Counsellor Programme in France (Programme relais allaitement- Prall).

The WHO Code is one of her passions! She has spoken on the Code at conferences around the world. Member of the Coordination française pour l’allaitement maternel (CoFam) since 2007, she was head of the Task Force on the Code and ethical questions. As a member of IBFAN *and GIFA, she was given the opportunity to participate in international meetings of the Codex Alimentarius and the OECD in Paris, as well as in week-long IBFAN conferences in Montecatini, Italy in 2007, and in Geneva in 2008. She also attended the Committee on the Convention on Rights of the Child in Geneva for IBFAN and helped prepare a country report on France underlining the importance of breastfeeding and the need to apply the Code (2009). She is an active member of IBFAN's Global Working Group on Contaminants in Breastmilk. In 2018, she represented LLLI at the second NetCode meeting in Geneva.

What’s New With The International Code On The Marketing Of Breast Milk Substitutes: It’s Not Just About Formula! - 60 min

The International Code on the Marketing of breast milk substitutes is the very cornerstone of breastfeeding protection, promotion and support, and an integral part of infant and young feeding policies around the world; yet it is often misunderstood or considered to be an out of date document with little relevance to breastfeeding issues today. Nothing could be further from the truth. The Code is updated regularly with additional resolutions voted at World Health Assemblies every two years, and covers far more than the marketing of breast milk substitutes in the first six months of life, but promotes optimal nutrition practices up to 36 months, and addresses conflict of interest with infant food companies. Indeed, the rapidly growing global market of breast milk substitutes, estimated at more than $70 billion in 2019, continues to undermine breastfeeding through its evermore aggressive and omnipresent marketing techniques, focused on parents, health professionals and health systems. The stakes are high – understanding and implementing the Code is an essential step towards ensuring optimal nutrition for infants and young children, whether breastfed or formula-fed.
Lucy Ruddle IBCLC

Lucy is an IBCLC in the UK. She has a thriving private Practice on the South Coast and a busy Facebook page known for its funny, relevant, and informative memes about breastfeeding and parenting. Lucy qualified in 2018 after 5 years of volunteering as a peer supporter and later as a breastfeeding counselor for a national breastfeeding helpline. She has written a book on relactation, due to be published by Praeclarus Press in the near future. Lucy’s interest in relactation started after she went through the process herself for her eldest baby, and her drive to qualify as an IBCLC came from a second challenging breastfeeding journey with her younger son who was unable to latch for several months. Aside from lactation, Lucy holds a diploma in Child Psychology and worked for 15 years in early years settings, both with the children and in roles supporting parents. She prides herself on her listening focused approach to lactation support, and sees it as the key to good practice in her own work.

Katrien Irena Nauwelaerts BA, MA, IBCLC

Katrien Nauwelaerts graduated as a prehistoric archaeologist in 2005. She’s the mother of three breastfed children and the administrator of the Dutch breastfeeding-website Borstvoeding Aardig, https://borstvoeding.aardig.be. Katrien worked as a volunteer breastfeeding-counselor, provincial coordinator and training manager for the Belgian breastfeeding-organisation Borstvoeding Aardig. In 2013 she became an IBCLC. Since 2013 she’s working as a lactation consultant at her own private practice Borstvoeding Aardig. She became a nutritionist and a herborist in 2014. Katrien shares her experiences and knowledge on lactation consulting as a public speaker since 2014 and as a guest lecturer at the Postgraduate “Lactation Consulting” at the Artevelde University of Ghent (Belgium) since 2018.

Breastfeeding and The Use Of Herbs - 60 min

The medical use of herbs is as old as mankind. In this lecture IBCLC and herborist Katrien Nauwelaerts explains the difference between the regular medical approach of breastfeeding problems and the more holistic solutions used in phytotherapy. Katrien Nauwelaerts explains how the use of herbs can support and sometimes even replace the more traditional clinical treatment of breastfeeding problems such as postpartum depression, low milk supply, oversupply, engorgement, breast infection, plugged ducts, mastitis, candidiasis, thrush, and Raynaud Syndrome etc.

Lucy Ruddle IBCLC

Relactation - A Supportive Approach - 60 min

Breastfeeding rates in the UK are still incredibly low, and around 80% of mothers say they wanted to breastfeed for longer than they did. Because of this, more people are beginning to talk about relactation, but the process is filled with myths, questions, and challenges. This talk will take you through why people want to relactate, including the grief and shame they may be experiencing following a difficult breastfeeding experience. We will talk about how the mother can surround herself with support and why this is so important. We will also look at supporting the baby to return to the breast, pumping tips which can help the mother to succeed, and we will discuss the risks and benefits of galactagogues - including the issues with the lack of comprehensive studies on this topic.

Mariana Colmenares Castaño MD, IBCLC

Mariana Colmenares Castaño was born in Mexico City, and from an early age she was fascinated by animals and nature. She studied medicine at the National University of Mexico (UNAM), and found her passion as a pediatrician doing her residency at the National Pediatric Institute. With the birth of her first child, Mariana witnessed the lack of knowledge and commitment with breastfeeding and nutrition within the medical profession. This was her impetus to specialize in breastfeeding medicine. Certified as a Lactation Consultant (IBCLC) in 2011 by the International Board of Lactation Consultant Examiners (IBLCE), she is currently a member of the International Lactation Consultant Association, the Academy of Breastfeeding Medicine and a proud founding member of the National Lactation Consultant Association of Mexico (ACCLAM), where she served on the Board of Directors as Education Coordinator (2014-2019). Regional coordinator for the Academy of Breastfeeding Medicine for the Region of LATAM (2018 to date) and an in coming board member 2019-2022. As part of her continuing professional training she studied at the International Breastfeeding Clinic, in Toronto CA.

Mariana is a member of the team for Breastfeeding Country Index BFCI, a project from Yale University and Universidad Iberoamericana whose goal is to develop an evidence base metric that can help decision-makers to understand the current status to elevate breastfeeding programs and increase breastfeeding rates. A frequent speaker at national and international conferences (plenary speaker at ILCA 2018), she has published numerous articles and co-authored a chapter for the National Academy of Medicine. To contribute to a medical profession better prepared to support breastfeeding, she teaches medical students at the National University of México and serves as a consultant for the National Health Institute and UNICEF.
Breastfeeding is the normative way to feed babies all over the world. We have access to large amount of scientific evidence that supports it. Advocates of breastfeeding such as health care professionals that protect, promotes and support the breast/chest feeding dyad can struggle sometimes with women or babies who cannot breastfeed as the World Health Organization suggests. Mothers with low milk supply are often supported by family, friends and health care with well meaning advices and remedies to help them do their best. Women who have insufficient glandular tissue (IGT) struggle with their milk supply, despite good breastfeeding management. Is common to see families with this issue in the second or third lactation failure without really understanding what might be going wrong. These babies can have dehydration in the neonatal period, hypernatremia or even death without anybody that could help with a correct diagnosis or help with achievable goals that can benefit both, mother and baby. It is of great importance to help with accurate diagnosis that can benefit also psychologically and choose continue breastfeeding with breast/chest supplementation.

**Breastfeeding with Insufficient Glandular Tissue - 60 min**

Breastfeeding activists.

**Nikki Hunter Greenaway MSN, RN, IBCLC**

Nikki Hunter Greenaway is a board-certified family nurse practitioner and internationally board-certified lactation consultant in New Orleans, Louisiana. In 2011, she founded Nurse Nikki Family & Maternity Services, a health consulting firm where she educates and counsels women, families, schools and businesses about pregnancy, birth, postpartum, breastfeeding, and new baby care. October 2018 she opened Bloom Maternal Health, a women’s health clinic that provides prenatal counseling and postpartum recovery care. Nurse Nikki is the co-founder of Louisiana’s first free-standing infant feeding clinic, the New Orleans Breastfeeding Center. She also co-created Café au Lait Breastfeeding Circle for Families of Color and Nikki & Nikki Lactation Career Consultants two important resources needed to improve breastfeeding outcomes specifically in the Black community. Nikki is a wife and mother of 3 mini breastfeeding activists.

**The Effects of Breastfeeding on Sexual Intimacy - 60 min**

Lactation consultations delve into perfecting a latch, maximizing milk supply and even recovering from giving birth. Very few visits discuss how breastfeeding can affect intimacy. The research on breastfeeding and intimacy is scarce and the assessment tools and evidence-based solutions are almost nonexistent. Perinatal providers often don’t recognize the relevance or have time to troubleshoot the inquiries. Lactation specialists understand that the situation exists but may not know how to approach the line of questioning or how to provide solutions. This webinar will illustrate the relationship between lactation-specific hormones and sex hormones. It will present the mental and physical struggles that families face when tackling the topic of returning to intimacy when breastfeeding. Providers and lactation consultants will receive recommendations on how to approach, assess and assist in resolving clients’ perceptions and concerns surrounding breastfeeding and intimacy. Discussion will offer web resources and how to add the topic into community resources.

**Paulina Erices MS, IBCLC, IMH-E**

Paulina Erices is a bilingual (Spanish) International Board Certified Lactation Consultant (IBCLC) in private practice and a Maternal Child Health Specialist for Jefferson County Public Health in Colorado. She holds a BS in Psychology from the Pennsylvania State University and a MS in Organizational Leadership from the University of Denver. Paulina is the coordinator for Adelante, the Latino Network for Health and Education and participates in several workgroups focused on child and family health, including the Early Childhood Colorado Partnership, the NICU Consortium, and the Community Leaders in Health Equity. Her areas of current work include providing direct service to families with babies who have been in the NICU and/or have other medical conditions; promoting maternal and infant mental health along the continuum of care; building community capacity to navigate health and education systems as well as influence program development/delivery; and establishing community-based participatory lactation programs to meet the needs of diverse communities. Paulina’s goal is to elevate the voices and influence of community members to effectively improve systems of care.

**Nursing A Preemie, Perspectives For Lactation Supporters and Professionals - 60 min**

In this presentation participants will learn about parents’ experiences with feedings in the NICU and continuation of lactation after going home, the importance of parent-child mutual-regulation and its implication in feeding success, strategies for lactation professionals to support the nursing relationship, and infant mental health concepts in relationship to feeding.

This presentation will include qualitative and quantitative data to broaden participants understanding of the context of lactation with a premature baby or a baby with special medical conditions. The participants will also receive information about multidisciplinary approaches and initiatives to support families with preemie babies.
Philip Anderson Pharm.D.

Philip O. Anderson, Pharm.D., FCSHP, FASHP is a Health Sciences Clinical Professor of Pharmacy at the UCSD Skaggs School of Pharmacy and Pharmaceutical Sciences where he heads the course on drug information.

Dr. Anderson has lectured and published extensively on drug use during breastfeeding including in professional journals and textbooks, including original research on drug excretion into breastmilk. Dr. Anderson founded the LactMed® database, which is part of the National Library of Medicine's Bookshelf. He continues to write LactMed® records and to expand the database. He has authored the medication appendix to the popular handbook, The Nursing Mothers’ Companion. Dr. Anderson is the Pharmacology Editor of the professional journal, Breastfeeding Medicine, and writes a monthly column on medication use during breastfeeding for the journal. He has also been a consultant to the US Food and Drug Administration on the topic of drug labeling with respect to use during lactation.

Rebecca LR Powell PhD, CLC

Rebecca LR Powell, PhD, CLC is an Assistant Professor in the department of Medicine, Division of Infectious Diseases, at the Icahn School of Medicine at Mount Sinai Hospital. Currently Dr. Powell is analyzing the phagocytosis responses of various cell types to better understand the effects of phagocytosis receptor profiles and the impact of antibody specificity on the elicitation of biologic function. Additionally, Dr. Powell is studying the contribution of breast milk leukocytes to the relatively low rate of HIV transmission in infants exclusively breastfed by their HIV-infected mothers. She received her PhD in Microbiology from the Sackler Institute, New York University School of Medicine, and her CLC from the Healthy Children Project.

Virus Killing By White Blood Cells In Breast Milk: How Breastfeeding Is Protective Against HIV - 60 min

Unless access to clean water and appropriate infant formula is reliable, the World Health Organization does not recommend HIV-infected mothers stop breastfeeding. Remarkably, only about 15% of babies exclusively breastfed by their HIV-infected mothers become infected with HIV. This suggests that although breast milk is a vehicle for HIV transmission, the milk itself exhibits a strong protective effect against infection. Breastfed babies ingest 100,000 - 100,000,000 maternal cells every day via breast milk; what remains largely unclear is the contribution of these cells to the milk’s anti-viral qualities. A large study has been undertaken to isolate cells from human milk in order to measure the ability of these cells to engulf and destroy HIV by a mechanism known as phagocytosis. Over 50 samples of breast milk obtained from healthy women have been analyzed. Phagocytosis of HIV was detected in all samples. Activity did not appear to correlate with stage of lactation. Various cell types known for phagocytic capacity were identified and measured, including granulocytes, monocytes, macrophages, and dendritic cells. All samples exhibited strong granulocyte activity. These data further demonstrate that phagocytosis of HIV by immune cells from breast milk can be measured. This information will be critical for design of therapeutic vaccines capable of reducing the likelihood of mother-to-child transmission of HIV in areas where breastfeeding is essential.

Medication Use During Breastfeeding - 60 min

Many mothers do not breastfeed their infants, discontinue breastfeeding or fail to take medications while they are breastfeeding. The principles of drug passage into breast milk are well established, although not well known by many health professionals. This presentation will review the principles of drug passage into breast milk, medications and factors that can cause a risk for adverse reactions in breastfed infants and discuss how to choose the most appropriate medications for mothers who are breastfeeding their infants.

Robot Reed MSN, CNM, ARNP, IBCLC

Robot (Rob) Reed (pronouns: they/them) is a certified nurse midwife and international board certified lactation consultant providing full scope midwifery and lactation care at Swedish Midwifery First Hill in Seattle, WA. As a queer and nonbinary healthcare provider, Rob is passionate about providing sex-positive, gender-affirming, trauma-informed care to their patients. Rob draws from over a decade of mindfulness practice to integrate compassion and intentional presence with the busyness of clinical practice. In addition to precepting midwifery students, Rob offers mentorship to queer and trans future healthcare providers, and consults with hospital maternity units on issues around gender inclusivity in sexual and reproductive healthcare and lactation care.

Queer Milk: Inclusive Lactation Care for LGBTQ Families - 60 min

LGBTQ families have long been made invisible in their experiences of building their families, and this extends to lactation care as well. Queer, trans, and nonbinary parents need and deserve support that centers the unique challenges they may face and celebrates their creativity and resilience. Trans men or nonbinary people who give birth may desire
to chestfeed their infants. Non-gestational partners who choose to induce lactation to share in breastfeeding their infants need guidance and advice through this process. Trans women may find breastfeeding to be a strongly gender-affirming experience. Many lactation professionals have a desire to support LGBTQ patients, but lack knowledge of inclusive terminology or specific ways to provide affirming care. This session will review gender-inclusive language, hands-on skills, and clinical pearls to improve lactation care for LGBTQ patients.

Sejal Fichadia  B.S (Microbiology), B.S. (Clinical Laboratory Science), IBCLC, CEIM

Sejal is an International Board Certified Lactation Consultant (IBCLC), she combines her professional expertise with her personal instincts as a mother and a supportive team member. She has been teaching infant massage classes in the community since 2014, both as a group class and private lessons. She uses her experience as an infant massage educator to teach parents how to bond with their babies through touch.

She also brings with her the following comprehensive toolkit: CAPPA-certified postpartum doula since 2014 Certified in and facilitates TummyTime™ method classes since 2014 Teaches Newborn Care and Breastfeeding classes Certified in skin-to-skin care for full term infants from the United States Institute of Kangaroo Care Certified Provider of Inmate Postpartum Care

She has presented at ILCA 2018 and 2019 and at their local lactation association for Oregon and Washington on the topics of facial massage for infants and how infant's posture impacts breastfeeding.

She strives to help each family by continuing to learn all she can about breastfeeding and parent-infant connection using the neurobiological lens.

When Sejal isn't with clients, you can find her at home in Hillsboro, Oregon with her husband, two kids, and a furbaby she loves to spoil.

Teaching Infant Facial Massage To Parents To Support A Functional Latch - 60 minutes

Background: The benefits of massage have been shown in many research studies. Massage relieves stress, pain and muscle tension. We expect to show that the same benefits can be achieved when facial massage is used to optimize a baby's oral structures to support a functional latch.

Method: We hope to use facial massage as a tool for babies that do not have an optimal latch. Babies born with gestational constraints, traumatic birth, exposure to stress during pregnancy or babies with tethered oral tissues may benefit from a parent massaging their face. Attendees will have access to handouts and a video link and may use their own face to practice the facial massage strokes.

Results: Building strength by oral and facial muscles, relaxing tension in the jaw, the lips, the muscles around the lips, and muscles of facial expression may help optimize the latch and hence prevent nipple damage.

Conclusion: IBCLCs can have an extra tool in their toolkit to offer to new parents. Facial massage techniques to support a functional latch can increase a parent’s confidence in caring for their baby, while increasing the levels of oxytocin and thereby promoting parent-infant bond.

Sharon L. Unger  MD, FRCP(C)

Dr. Sharon Unger comes from the East Coast of Canada and is a neonatologist at Sinai Health System in Toronto, Canada. She is a co-primary investigator for the Canadian Institutes of Health Research funded OptiMoM and MaxiMoM programs of research as well as the medical director for the Rogers Hixon Ontario Human Milk Bank. Her research interests are primarily in the use of human milk for the high risk neonate and its long term impact.

The Use Of Human Donor Milk In For The High Risk Neonate - 60 min

Mother's milk is the unequalled nutritional source for the preterm or medically fragile neonate. Beyond its nutritional impact, it contains a myriad of bioactive molecules that are of particular health importance for the sick neonate. A majority of mothers who are pump dependent with an infant in a neonatal intensive care unit have an incomplete supply of their own milk. In this instance, human donor milk is an important supplement to have available while the mother is supported to increase her own milk supply. This lecture will focus on various aspects of the use of human donor milk including a review of the differences between mother’s milk and donor milk and the current methodologies used for processing donor milk. Recommended clinical guidelines will be discussed that are based on the evidence for short and long term health outcomes following the use of donor milk in the neonatal period. Future considerations will be explored including ethical issues with respect to donor milk use.
Sonia Semenic RN, PhD

Sonia Semenic is an Associate Professor at the Ingram School of Nursing, McGill University (Montreal, Quebec, Canada) and a Nurse Scientist at the McGill University Health Center. After many years of experience as an IBCLC and Clinical Nurse Specialist in maternal-child health, Sonia completed a PhD in Nursing and postdoctoral training in community health. Her research aims to better understand the process of knowledge translation (KT) in perinatal health, with a particular focus on the implementation of evidence-based practices to protect, promote and support breastfeeding. She currently co-leads the Knowledge Translation Platform for the Quebec Nursing Intervention Research Network, and teaches graduate courses on knowledge translation in nursing practice.

Moving from Evidence to Practice: Knowledge Translation and Breastfeeding Support - 30 minutes

Despite irrefutable research evidence for the benefits of breastfeeding, less than 37% of infants worldwide meet WHO targets for optimal breastfeeding. Persistently low breastfeeding rates are due in part to poor uptake of breastfeeding best-practice guidelines, such as the Baby-Friendly Hospital Initiative. The growing field of knowledge translation in healthcare reveals that it takes from 8-30 years for research findings to be adopted into clinical practice, and that up to 45% of patients don't receive evidence-based healthcare. This presentation aims to help those providing lactation support to better understand the complexity of factors influencing the use of evidence in practice, as well as what can be done to facilitate the uptake of best practice guidelines to protect, promote and support breastfeeding. Whether or not care providers follow evidence-based practices is influenced by the nature of the evidence (e.g., perceived relevance of the evidence), characteristics of the care providers (e.g., motivations to change practice) as well as characteristics of the care environment (e.g., leadership support for change). Successful strategies for supporting practice change are tailored to local barriers and facilitators to evidence use, and can be informed by the growing number of theoretical models and frameworks for KT in healthcare.

Ted Greiner PhD (International Nutrition)

Ted Greiner received a PhD in nutrition for developing countries from Cornell University. For 19 years he worked as nutrition advisor for the Swedish International Development Cooperation Agency, based at Uppsala University where he was Associate Professor of International Child Health, helping to ensure their long-term support for IBFAN and WABA. Dr. Greiner was Professor of Nutrition at Hanyang University in South Korea for seven years. He has consulted for UNICEF, World Bank, FAO and others. He is now retired and edits the journal World Nutrition. He has lived in 8 countries and worked in 10 more. His areas of research expertise include infant feeding and programs to combat vitamin A, iron and iodine deficiency. In the 1970s, he did the first scientific work on the impact of baby food advertising on breastfeeding patterns. His PhD dissertation was on the planning and evaluation of a 1978-81 project to protect, support and promote breastfeeding in Yemen (terminology quickly adopted by UN agencies). Over the next decades, the duration of breastfeeding there doubled. During the planning the Innocenti meeting, he represented Sida, one of the 4 agencies involved. He was active in changing how WHO viewed HIV and infant feeding. He has over 100 breastfeeding-related publications.

Alcohol Consumption During Lactation - 60 minutes

Moderate alcohol use by breastfeeding women appears to be relatively common. Alcohol concentrates in breast milk at levels similar to maternal blood, peaking at 30-60. Most studies find no link with the duration of breastfeeding. However, seven studies have found a link with a shorter duration of exclusive breastfeeding. Alcohol affects oxytocin release, leading to reductions in breast milk consumption in the following hours and reduces infant sleep, both temporary if the mother does not continue to drink. These effects on the infant and the breastfeeding process could be interpreted by mothers as signs of infant dissatisfaction with their breast milk, “insufficient milk,” or other causes for premature supplementation. Chronic alcohol consumption may have a number of more serious effects, including on infant development, but research is limited. Younger infants tolerate alcohol worse, so abstention or avoidance of infant exposure for the first months of breastfeeding may be wise. Messages to mothers on this issue are conflicting, confusing and often outdated. Too little is done to teach mothers how to reduce infant exposure. Research is needed in different cultures into whether various forms of cautionary messages are likely to discourage breastfeeding.

Tomoko Seo MD, IBCLC, FABM

Tomoko Seo is a pediatrician and IBCLC in Japan, working in a private clinic with colleagues including IBCLCs who practice's general pediatrics and breastfeeding medicine. She became certified as an IBCLC in 1999 and recertified in 2004, 2009, 2014 and 2019. She is a member of the Japanese Association of Lactation Consultants (JALC) since 1999, when it was founded. JALC has been holding conferences several times a year, including the “Annual Breastfeeding Seminar for Physicians” since 2005 to provide breastfeeding education to physicians and improve breastfeeding support among physicians. Tomko has been a member of the Academy of
Breastfeeding Medicine (ABM) since 1999. She is also an active member of the International, Protocol, Education, Conference, Membership Committees of ABM.

**Lactation Education as Advocacy: Increasing Knowledge Among Physicians - 60 min**

Breastfeeding facilitates good health in infants and mothers, and for all humans throughout life. Medical professionals should be advocates for breastfeeding, and physicians could be one of the most influential advocates. However, many medical students, residents and physicians have very limited opportunities to learn about breastfeeding and human lactation during their medical education. From another point of view, breastfeeding is a private experience as well as a scientific matter. If a physician or a partner successfully breastfeeds, she/he may become a more effective advocate for breastfeeding. So, it is imperative to provide medical students, residents, and young physicians with education about breastfeeding and to enable them to experience successful breastfeeding personally, in order for them to promote and support breastfeeding among their patients.

The Academy of Breastfeeding Medicine is an international organization of physicians who protect, promote, and support breastfeeding, and one of its goals is to develop and disseminate the standard for physician education around breastfeeding and human lactation. ABM has developed protocols and statements for health care providers to utilize for breastfeeding management.

The WHO/UNICEF revised Ten Steps to Successful Breastfeeding in 2018, includes in Step2 “Ensure that staff have sufficient knowledge, competence and skills to support breastfeeding”. This included physician education. There are many ways to educate physicians, and ABM materials could be one option.

**Vanessa Simmons CLEC**

Vanessa Simmons is a published and professional photographer who has dedicated her recent work to her current photography project, NormalizeBreastfeeding.org. She was inspired by her own breastfeeding struggles, lack of support, and her desire to capture diverse variations of normal breastfeeding. Vanessa initiated the first International Day to Normalize Breastfeeding in an effort to raise awareness worldwide about how normal it is to breastfeed and pump on demand until the mother and child are ready to stop. She seeks to strengthen breastfeeding communities in the areas where local groups have been established worldwide. She encourages members of the local groups to meet up in person and connect with local resources. In April of 2018, Vanessa received her certificate in Lactation Education & Counseling from the University of California San Diego Extension program. She is native to San Diego where she currently resides with her husband and three children.

**Liberate Millennials from The Pressures of Breastfeeding With the Power of Social Media Support - 60 min**

Many studies from around the world show that supporting moms on their journey can help them to successfully breastfeed and reach their personal feeding goals. Today we see many lactating parents go online through various social media platforms in search of support. Vanessa Simmons uses storytelling and humor to share her own support experiences and explains why creating social media support for millennial families liberates them from the on-going pressures around breastfeeding.

**Wilaiporn Rojjanasrirat PhD, RN, IBCLC**

Dr. Rojjanasrirat is a Professor and Director of Research and Scholarship at Graceland University School of Nursing, Independence, Missouri. She is currently teaching graduate level, on-line nursing research courses. Her area of research focuses on promoting and supporting breastfeeding mothers.

She is a current president of the Sigma Pi Eta Chapter and a former president of the Greater Kansas City Lactation Consultant association, and a current Chair of the finance committee of Board of Director for the Maternal and Child Health Coalition of the Greater Kansas City, Missouri, USA.

**Understanding Lactation-Related Research - 60 min**

Evidence-based practice directly influences and drives day-to-day clinical practice in the current healthcare environments. Lactation consultants need to keep up to date with research evidence for best practice. Although the primary goal of lactation providers is to provide optimal lactation care to breastfeeding mothers, it is necessary to know how to apply appropriate evidence to use on a regular basis by understanding research process and how to read research articles. The purposes of this presentation are to present basic concepts related to conducting and understanding lactation related research including quantitative and qualitative research methods. In addition, the presentation also will cover the guides to reading scientific research articles. The participants do not require extensive or advanced medical or research methodological knowledge to attend this workshop. Some breastfeeding research papers including case studies, clinical trials, and qualitative research will be used as examples.
Panel Discussion 2020

**Lucy Ruddle IBCLC**

Lucy is an IBCLC in the UK. She has a thriving private practice on the South Coast and a busy Facebook page known for its funny, relevant, and informative memes about breastfeeding and parenting. Lucy qualified in 2018 after 5 years of volunteering as a peer supporter and later as a breastfeeding counselor for a national breastfeeding helpline. She has written a book on relactation, due to be published by Praeclarus Press in the near future. Lucy’s interest in relactation started after she went through the process herself for her eldest baby, and her drive to qualify as an IBCLC came from a second challenging breastfeeding journey with her younger son who was unable to latch for several months. Aside from lactation, Lucy holds a diploma in Child Psychology and worked for 15 years in early years settings, both with the children and in roles supporting parents. She prides herself on her listening focused approach to lactation support, and sees it as the key to good practice in her own work.

**Paulina Erices MS, IBCLC, IMH-E (r)**

Paulina Erices is a bilingual (Spanish) International Board Certified Lactation Consultant (IBCLC) in private practice and a Maternal Child Health Specialist for Jefferson County Public Health in Colorado. She holds a BS in Psychology from the Pennsylvania State University and a MS in Organizational Leadership from the University of Denver. Paulina is the coordinator for Adelante, the Latino Network for Health and Education and participates in several workgroups focused on child and family health, including the Early Childhood Colorado Partnership, the NICU Consortium, and the Community Leaders in Health Equity. Her areas of current work include providing direct service to families with babies who have been in the NICU and/or have other medical conditions; promoting maternal and infant mental health along the continuum of care; building community capacity to navigate health and education systems as well as influence program development/delivery; and establishing community-based participatory lactation programs to meet the needs of diverse communities. Paulina’s goal is to elevate the voices and influence of community members to effectively improve systems of care.

**Vanessa Simmons CLEC**

Vanessa Simmons is a published and professional photographer who has dedicated her recent work to her current photography project, NormalizeBreastfeeding.org. She was inspired by her own breastfeeding struggles, lack of support, and her desire to capture diverse variations of normal breastfeeding. Vanessa initiated the first International Day to Normalize Breastfeeding in an effort to raise awareness worldwide about how normal it is to breastfeed and pump on demand until the mother and child are ready to stop. She seeks to strengthen breastfeeding communities in the areas where local groups have been established worldwide. She encourages members of the local groups to meet up in person and connect with local resources. In April of 2018, Vanessa received her certificate in Lactation Education & Counseling from the University of California San Diego Extension program. She is native to San Diego where she currently resides with her husband and three children.

**The Real Life Experience of Working in Lactation Care: Struggles and Solutions – 60 min**

It’s a wonderful feeling when you’re able to support a family in getting to a place of successful breastfeeding/chestfeeding. Those moments when things suddenly click and baby starts nursing effectively and their overwhelmed parents are able to finally see an end to their struggles, are heartwarming and we celebrate those achievements for both our clients and ourselves. What doesn’t get talked about very often however, is the struggles that go alongside those triumphs. The caregiver burnout, compassion fatigue, guilt, and overwhelming feelings of failure that can derail our confidence in ourselves as care providers. This panel digs deep into the realities of working as a lactation care provider, examining both the struggles and possible solutions.
Interactive Sessions 2020

Annie Frisbie MA, IBCLC

Annie Frisbie has been an IBCLC in private practice since 2011. Her background is in media, where she worked very closely with producers, content developers, and tech thought leaders on business strategy, content development, contracts, legal clearances, and more. She has also produced training for professional media software solutions as well as created and managed print and video content for media professionals.

In 2018 she was honored with the US Lactation Consultant Association’s President’s Award, “awarding those that demonstrate extraordinary service to the association and profession.”

She is a produced screenwriter and proud member of the Writers Guild of America, East. She have a BA from Franklin and Marshall College, and an MA in Cinema Studies from New York University. In a previous life I was a film critic. I live with my husband and our two children in Queens, New York.

Ask the Expert: Best Practices for Intake, Documentation, and Reporting – 60 min

Follow the complete life cycle of a typical client through collecting information during the intake process, documenting and charting effectively and efficiently, and communicating with families and their care providers. Bring your questions about incorporating technology while protecting client/patient privacy and providing compassionate care so families can meet their goals.

Christy Jo Hendricks IBCLC, RLC, CLE, CCCE

Christy Jo Hendricks, IBCLC, is an international speaker, consultant, educator and author. She has made a career of teaching lactation to professionals and parents in ways that simplify learning and keep audiences engaged.

She has been awarded the US Presidential Volunteer Award, the Phyllis Klaus Founder’s Award for her contribution to the Mother/Baby bond and the Above and Beyond Award for innovative projects that exemplify the mission of Public Health. She has also been named Lactation Educator Faculty of the Year from CAPPA and has earned their Visionary Award.

Christy Jo created an award-winning IBCLC prep curriculum. Her course has been used to train hundreds of students to become Lactation Consultants. In 2019, she founded Lactation University in order to serve aspiring lactation consultants on their journey to become IBCLCs.

She resides with her family in California where she continues to serve her community as a Private Practice Lactation Consultant, Health Educator for the Department of Public Health and faculty for the CAPPA CLE© and Childbirth Educator Programs.

Sharing Your Wisdom: From Abstract Idea to Awesome Prenatal Breastfeeding Class – 60 min

Get that idea of creating a prenatal breastfeeding class out of your head and make it a reality! You have wisdom to share, but how do you share it in a way that captures parents’ attention and appeals to different learning styles? In this interactive presentation, I’ll guide you through the process of creating a prenatal breastfeeding class. Join in as we work with tools and handouts that will help you create a prenatal breastfeeding class that meets the goal of setting parents up for breastfeeding success!

Melissa Cole MS, IBCLC

Melissa Cole is a board-certified lactation consultant, neonatal oral-motor assessment professional and clinical herbalist in private practice. Melissa is passionate about providing comprehensive, holistic lactation support and improving the level of clinical lactation skills for health professional. She enjoys researching and writing, especially on topics such tongue tie and botanical medicine. Her bachelor's degree is in maternal/child health and lactation and her master’s degree is in therapeutic herbalism. Before pursuing her current path, Melissa's background was in education and cultural arts, which has served her well in her work as a lactation consultant and healthcare educator. She loves living, working and playing in the beautiful Pacific Northwest with her 3 children.

A Case Study Approach to Critical Thinking Skills for Lactation Professionals – 60 min

There are many reasons infants struggle to latch and feed well. Critically thinking through a case involves assessing all the variables that may be impacting feedings. This is no easy task when we must consider what is going on on the parent's side and the infant's side. How can we put all the pieces of a complex case together in order to be an effective lactation detective? This interactive session is designed to help providers implement critical thinking skills in order to think outside the box when it comes to difficult cases. Walk through the cases with me and put your skills to the test!
Michelle Pensa Branco MPH IBCLC

Michelle Pensa Branco MPH IBCLC is a lactation consultant and public health advocate. In addition to her clinical practice, which has included both in-hospital, outpatient and private practice settings, she advocates for improved maternal-child health practices at the local, national and global level. She has a particular interest in the impact of trauma to breastfeeding families, models of peer support to improve breastfeeding outcomes and the application of health communication principles to the promotion and protection of breastfeeding. Michelle serves as the Director of Peer Support Programs and provides clinical lactation expertise for Nurture Project International, the only international NGO focused exclusively on infant feeding in emergencies. With Jodine Chase, she co-founded a Canadian non-profit organization, SafelyFed Canada. A La Leche League Canada (LLLC) Leader since 2007, Michelle is currently Vice-Chair of the LLLC Board with a focus on external relations. She is also an active member of the Ontario Public Health Association's Breastfeeding Promotion Working Group and serves on the communication team of the Breastfeeding Committee for Canada. Michelle has previously served as the Communications Director for the Canadian Lactation Consultants Association as well as the Toronto Coordinator of INFACT Canada. When she is not travelling for work, Michelle stays close to home, living with her family just outside Toronto, Ontario, Canada.

Facilitated Discussion on IYCF-E and the Role of the Lactation Professional – 60 min

In emergencies, breastfeeding saves lives - and yet, regardless of the location or type of disaster, breastfeeding and complementary feeding practices are eroded during an emergency. Infant and young child feeding in emergencies (IYCF-E) requires a multi-sectoral approach to meet the needs of both breastfed and non-breastfed children. Where do the skills of breastfeeding counsellors, educators and IBCLCs fit into the IYCF-E response? What competencies do IBCLCs need to provide clinical care in a humanitarian setting and how can IBCLCs obtain those (if they don't already have them)? Bring your thoughts, experiences and questions and join us for a facilitated discussion about the role of skilled breastfeeding support in protecting infants and young children in emergencies.
Conference Add-ons

**Breastfeeding and Medically Complex Infants Lecture Pack 6 Hours**

Infants with complex medical issues can pose a unique challenge for the lactation care provider. Join our expert speakers for an in depth look at supporting human milk feeding in families where the infant requires extra care and expertise to establish and or maintain breastfeeding/chestfeeding. Learn more about breastfeeding through childhood cancer, breastfeeding and late preterm infants, neurological conditions, congenital heart disease and Down Syndrome, along with learning more about allergies, sensitivities and galactosemia.

- **Assisting Late Preterm Dyads Achieve Breastfeeding/Chest Feeding Success**
  Angela Lober PhD, RNC, IBCLC - 60 minutes

- **Neurologic Conditions and The Breastfed Infant**
  Ellen Lechtenberg MPH, RD, IBCLC - 60 minutes

- **Yes You Can! Breastfeeding A Baby With Down Syndrome**
  Heather Miller RN (Disability), Cert IV in Breastfeeding Education (Community) - 60 minutes

  Mariana Colmenares Castaño MD, IBCLC - 60 minutes

**Complex Medical Issues in the Lactating Parent Lecture Pack 6 Hours**

Medical issues in the lactating parent can often create difficulties with breastfeeding/chestfeeding and pose a challenge for the lactation care provider. Join our expert speakers in this special package focused on providing knowledge and skills to help with these particular situations. Learn more about situations such as delayed lactogenesis II and gestational diabetes, mast cell disorders, supporting clients who are facing fertility treatment, dysphoric milk ejection, inflammatory disorders and breast cancer and lactation.

- **Beyond the Letown: Dysphoric Milk Ejection Reflex and the Breastfeeding Mother**
  Alia Macrina Heise IBCLC - 60 minutes

- **Breast Cancer During Breastfeeding and Breastfeeding After Breast Cancer**
  Fedro A Peccatori MD, PhD - 60 minutes

- **Supporting Clients Facing Fertility Treatment**
  Joy MacTavish MA, IBCLC, RLC - 60 minutes

- **Beyond Fenugreek: An Burning Up: Supporting Birth Parents with Inflammatory Disorders**
  Leah De Shay BA, IBCLC - 60 minutes

- **A Lactation Specialist’s Guide to Mast Cell Disorders**
  Tamara Drenttel Brand MA, MPH, IBCLC - 60 minutes
Virtual Exhibitors

GOLD Learning invites you to exhibit at our next series of online conferences. As a conference exhibitor, your information will be made visible to all public visitors and registered delegates. Plus conference attendees will be encouraged to interact with exhibitor throughout the conference period.

Virtual Delegate Bag
A great way to promote your product or services, you’ll have the opportunity to provide special discounts and offers to registered Delegates. No printing required!

Highlight Features
Maximize your engagement with our Gold & Silver level exhibitor packages. Have your product or services featured through the Delegate newsletter as well as on the conference Facebook & Twitter social media profiles.

Exhibiting Period
No need to travel! Your virtual exhibition exposure begins as soon as you sign on and runs until 1 month after the conference period ends. Get in early to maximize your visibility.

Conference Registration
Attend yourself, offer it through a contest or sponsor someone that could benefit from the education. A great way to reward your customers ($250 USD Value)

Interested in becoming an Exhibitor? Contact us to learn more!
Email: team@goldlearning.com  |  Phone: +1 604 566 8311

How GOLD Works

The 2020 GOLD Lactation Conference kicks off on April 1, 2020 with our Free Live Keynote Presentation and is followed by a series of “Live Days” which are held over the following weeks. Each Live Day consists of 4 or more Live Speaker Presentations followed by a Question & Answer Session after each presentation. This year, we’ve made attending Live presentations even easier with convenient presentation times to fit a range of international timezones.

Each presentation is recorded and we make recordings available in the Delegates Area at the end of each Live Day. Conference Attendees will have until June 1, 2020 to watch as many presentations as they like. Those with GOLD Annual Membership will have until June 22, 2020.

1. Registration

Early Bird Registration for the Conference opens on January 15, 2020. Registration is very easy and only takes a few minutes to complete. In addition to the discounted early bird rate for individual Delegates, there are additional discount savings for groups and those from certain Countries.

Early Bird Registration Opens: January 15, 2020
Regular Registration Opens: March 17, 2020
Final Day for Registration: May 15, 2020

2. The Delegate Area

After Registration, you will be sent login details that will give you access to the Conference Delegates Area. From this page, your GOLD Experience begins!

- Print Custom Live Presentation Schedule
- Access Live & Recorded Presentations
- Download Certificates
- Interact on Forums & More!

3. View Presentations

Viewing Presentations is easy with our Virtual Meeting Rooms! All you need is a computer & an internet connection. Watch Presentations LIVE or view the Recordings the following day.

- Live Speaker Question & Answer Session
- Presentation Handouts for making notes
- Start & Stop & Re-watch Recordings
- 8 WEEKS+ Viewing Time. At your own Pace

4. Verify Attendance

After each presentation, simply check off your attendance on our Attendance Record page. Once all complete, submit your final attendance record to unlock your Conference Certificate.

5. Download Certificate

Easily Download / Print your Certificate of Attendance which is automatically generated based on your Attendance Record. Receive individual certificates.
Continuing Education Credits

For our GOLD Lactation 2020 Conference, we'll be offering 32.5 hours of continuing education for the main conference. The following credits have been applied for:

**CERPs**
Applicable to IBCLC Lactation Consultants, Certified Lactation Consultants (CLCs), CBEs, CLE, Doulas & Birth Educators, this program has been approved for 32.5 CERPs in total. 28.5 CERPs (23.5 L-CERPs, 3 R-CERP, 2 E-CERPs) for the main conference and for 4 CERPs (4 L-CERPs) for the Interactive Sessions. GOLD Learning is designated as a Long Term Provider of CERPs by the International Board of Lactation Consultant Examiners (IBLCE) - Approval #CLT114-07.

**CMEs - Continuing Medical Education**
Applicable to Physicians, Nurse-Midwives and those that require AAFP CME credits. This program has been reviewed and is acceptable for credit by the American Academy of Family Physicians. This program is approved for 28.5 AAFP CME credits.

**Nursing Contact Hours**
This program has been approved for 28.5 Nursing Contact Hours from the American Nurses Association of Massachusetts. ANA Massachusetts is accredited as an approver of continuing nursing education by the American Nurses Credentialing Center's Commission on Accreditation.

**Midwifery CEUs - MEAC Schools**
Applicable to NARM Certified Professional Midwives and those require MEAC Certified Education. This program has been approved for 2.8 MEAC CEUs (0.1 MEAC CEU is equivalent to 1 NARM CEU) by the Midwifery Education Accreditation Council.

**Dietetic CPEUs - Dietetic Continuing Education Units**
This program has been approved for Dietetic CPEUs by the Commission on Dietetic Registration the credentialing agency for the Academy of Nutrition and Dietetics.

**GOLD Lactation 2020 Add-ons**
The Breastfeeding and Medically Complex Infants Lecture Pack (6 hours) and the Complex Medical Issues in the Lactating Parent Lecture Pack (6 hours) have each been approved for 6 CERPs (6 L-CERPs), CMES, Nursing Contact Hours, Dietetic CPEUs & 0.6 MEAC Midwifery CEUs.

Please visit our Continuing Education page for the most current information on approved continuing education credits and a list of instructional hours.

Technical Information

You're never alone! Our GOLD Technical Staff will provide online technical support for you during the Conference.

The GOLD virtual meeting room is accessible by all desktop computers as well as most modern mobile devices (You will be required to download an APP). You will be able to access the conference from anywhere, as long as you have an Internet connection.

Our team is based in beautiful Vancouver, Canada, and is happy to help you with any question or concern you have. We're available via phone or email, and during the live presentations we are on live chat. We looking forward to ‘meeting’ you online!
